

15K Air-Operated Dump Valves

The Air-Operated Dump Valve allows an operator to remotely control pressure in cleaning applications from 15,000 psi. When air is sent to the cylinder, the valve closes and allows the system to build pressure. The valve opens when the air is exhausted, reducing system pressure to near atmospheric.

- 30-second field replaceable cartridge design for minimal downtime.
- Remote pneumatic operation for reduced operator fatigue and added convenience and safety.
- Inlet and outlet connections threaded 1/2 NPT.
- All components precision machined from stainless steel.
- Heavy-duty air cylinder.
